Evgeny Khukhro

Sobolev Institute of Mathematics,
Novosibirsk

This five-day workshop aims to bring together leading mathematicians and active researchers working on the theory of groups in order to exchange ideas, present new results and identify the key problems in the field, especially but not exclusively, on the relationship between a finite group and another one acted upon by the first. There will be six mini courses, several invited talks, a limited number of contributed talks and a poster session.

We are looking forward to seeing you in Istanbul.
